                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is not the entire insert of clone T22C8. It may be shorter because we only sequence overlapping sections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             99069613

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a sma overlap between neighbouring submissions.

It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5836 5935: gap of 100 bp 10 length 31563 1652: contig of 25627 bp in length 31663 33883: contig of 2221 bp in length 33884 33983: gap of 100 bp 33984 50157: contig of 16174 bp in length 50158 50257: gap of 100 bp 50258 90171: contig of 39914 bp in length 90172 90271: gap of 100 bp 90272 113829: contig of 33588 bp in length 113830 113830: cancer 100 bp

E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk on Nov 29, 2001 this sequence version replaced gi:16974043. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= ... 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: _ EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes a Dirofilaria immitis nucleic acid molecule, CC that encodes a cuticlin protein. The Dirofilaria immitis nucleic acid con lecule is useful as a probe to identify nucleic acid molecules, as a CC primer to produce nucleic acids, as a therapeutic reagent, e.g., gene ct therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein, CC antibodies raised against it, and inhibitory compounds of cuticlin may CC all be used in compositions to protect animals, especially mammals such CC as cats, dogs, and humans. The antibodies may be used to passively cimmunize an animal, or as reagents in assay to detect infection of CC helminths, or as tools to screen expression libraries to recover desired proteins. They may also be used to target cytotoxic agents to the CC parasite and kill it directly. The present sequence encodes a cuticlin CC polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The specification describes a Dirofilaria immitis nucleic acid molecule, that encodes a cuticlin protein. The Dirofilaria immitis nucleic acid concludes a service to identify nucleic acid molecules as a probe to identify nucleic acid molecules, as a primer to produce nucleic acids, as a therapeutic reagent, e.g., gene to therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein, and inhibitory compounds of cuticlin may cantibodies raised against it, and inhibitory compounds of cuticlin may call be used in compositions to protect animals, especially mammals such as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of the inminits, or as tools to screen expression libraries to recover desired proteins. They may also be used to target cytotoxic agents to the complement of an open reading frame encoding a cuticlin polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local Sin

The cuticlin protein, antibodies raised against it, and inhibitory compounds of cuticlin meall be used in compositions to protect animals, especially mammals as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of helminths, or as tools to screen expression libraries to recover desproteins. They may also be used to target cytotoxic agents to the parasite and kill it directly. The present sequence encodes a cuticle polypeeride.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                B
The specification describes a Dirofilaria inmails nucleic acid that encodes a cuticlin protein. The Dirofilaria immitis nucleic acid molecules, as a solution of the product of the straight nucleic acid molecules, as a probe to identify nucleic acid molecules, as a probe to identify nucleic acid molecules, as a protein of the product nucleic acids, as a therapeutic reagent, e.g., gene therapy to inhibit cuticlin acids, as a therapeutic reagent, and acid inhibitory compounds of cuticlin metallodies raised against it, and inhibitory compounds of cuticlin metall be used in compositions to protect animals, especially mammals so as cats, dogs, and humans. The antibodies may be used to passively as cats, and humans areagents in assay to detect infection of the superior of the su
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acid molecule encoding a Dirofilaria immitis cuticlin protein is useful as a vaccine to prevent parasitic helminth infection

```

The present sequence is the coding strand of cDNA encoding novel Dirofilaria immitis cuticlin DiCut-1A protein (see ABP76278). Nucleic acids comprising the complementary strand, the coding sequence coding strand and its complementary strand are also claimed. DiCut-1A cDNA was identified from a D. immitis larval expressed sequence tag DNA sequence on the basis of homology to Ascaris and Caenorhabditis elegans cut-1 cuticlin genes. The encoded protein has 91% identity with the Ascaris homologue. The invention provides D. immitis and Brugia malayi parasitic helminth cuticlin proteins, nucleic acids, antibodies, compounds that

Therapeutic compositions comprising such proteins, nucleic acids, antibodies and/or inhibitors, including genetic vaccines, recombinant virus vaccines and recombinant cell vaccines, are used to protect animals from diseases caused by parasitic helminths, and to inhibit the moulting of filariid larvae in an animal.

that encodes a cuticlin protein. The Dirofilaria immilis nucleic acid molecule is useful as a probe to identify nucleic acid molecules, as primer to produce nucleic acids, as a therapeutic reagent, e.g., gene therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein, antibodies raised against it, and inhibitory compounds of cuticlin manall be used in compositions to protect animals, especially mammals su as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of

protein nucleic acid molecule encoding a Dirofilaria immitis cuticlin in is useful as a vaccine to prevent parasitic helminth infect infection

Example 1; Column 43-46; 29pp; English.

The specification describes a Dirofilaria immitis nucleic acid molecule, that encodes a cuticlin protein. The Dirofilaria immitis nucleic acid molecules is useful as a probe to identify nucleic acid molecules, as a primer to produce nucleic acids, as a therapeutic reagent, e.g., gene therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein, antibodies raised against it, and inhibitory compounds of cuticlin may all be used in compositions to protect animals, especially mammals such as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of helminths, or as tools to screen expression libraries to recover desired proteins. They may also be used to target cytotoxic agents to the parasite and kill it directly. The present sequence represents the complement of DNA encoding a cuticlin polypeptide.

Therapeutic compositions comprising such proteins, nucleic acids, antibodies and/or inhibitors, including genetic vaccines, recombinant virus vaccines and recombinant cell vaccines, are use to protect animals from diseases caused by parasitic helminths, at to inhibit the moulting of filariid larvae in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Dirofilaria immitis cuticlin DiCut-1B protein (see ABB76279). Nucleic acids comprising the complementary strand, the coding sequence coding strand and its complementary strand are also claimed. DiCut-1B cDNA was identified from a D. immitis larval expressed sequence tag DNA sequence on the basis of homology to Ascaris and Caenorhabditis elegans cut-1 cuticlin genes. The encoded protein has 81% identity with the Ascaris homologue. The invention provides D. immitis and Brugia malayi parasitic helminth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New parasitic helminth cuticlin proteins and nucleic acids isolated form Dirofilaria immitis, useful for protecting animals from diseases caused by parasitic helminths or for inhibiting molting of filariid larvae in an animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1372 BP; 456 A; 229 C; 281 G;

that encodes a cuticlin protein. The Dirofilaria immitis nucleic acid molecule is useful as a probe to identify nucleic acid molecules, as a primer to produce nucleic acids, as a therapeutic reagent, e.g., gene therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein,
                                                                                                                                                                                                                                                   Novel nucleic acid
protein is useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antibodies raised against it, and inhibitory compounds of cuticlin may all be used in compositions to protect animals, especially mammals such as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of helminits, or as tools to screen expression libraries to recover desired proteins. They may also be used to target cytotoxic agents to the parasite and kill it directly. The present sequence encodes a cuticlin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes a Dirofilaria immitis nucleic acid molecule, that encodes a cuttclin protein. The Dirofilaria immitis nucleic acid molecule is useful as a probe to identify nucleic acid molecules, as a primer to produce nucleic acids, as a therapeutic reagent, e.g., gene therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein, antibodies raised against it, and inhibitory compounds of cuticlin may all be used in compositions to protect animals, especially mammals such as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of helminths, or as tools to screen expression libraries to recover desired parasite and kill it directly. The present sequence is the complement

```

The present sequence is the coding strand of a partial cDNA clone for novel Brugia malayi BmCut-1B protein (see ABB76280). The complementary strand of this sequence is also claimed. The BmCut-1A cDNA was obtained from adult female cDNA by PCR

using primers

Dirofilaria

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cuticlin nucleic acids. The invention provides D. immitis and B. malayi parasitic helminth cuticlin proteins, nucleic acids, antibodies, compounds that inhibit cuticlin activity, and methods of obtaining them. Therapeutic compositions comprising such proteins, nucleic acids, antibodies and/or inhibitors, including genetic vaccines, recombinant virus vaccines and recombinant cell vaccines, are used to protect animals from diseases caused by parasitic helminths, and to inhibit the moulting of filariid larvae

```
molecule is useful as a probe to identify nucleic acid molecules, as primer to produce nucleic acids; as a therapeutic reagent, e.g., gen therapy to inhibit cuttclin activity or production, or in a vaccine prevent infection with helminth parasites. The cuticlin protein, antibodies raised against it, and inhibitory compounds of cuticlin me all be used in compositions to protect animals, especially mammals as as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of helminths, or as tools to screen expression libraries to recover des proteins. They may also be used to target cytotoxic agents to the parasite and kill it directly. The present sequence encodes a cuticle
                                                                                                                                                                                                                                                                                                                                                                                (CHAN/)

                The specification describes a Dirofilaria immitis nucleic acid molecule that encodes a cuticlin protein. The Dirofilaria immitis nucleic acid molecule is useful as a probe to identify nucleic acid molecules, as a primer to produce nucleic acids, as a therapeutic reagent, e.g., gene therapy to inhibit cuticlin activity or production, or in a vaccine to prevent infection with helminth parasites. The cuticlin protein, antibodies raised against it, and inhibitory compounds of cuticlin may all be used in compositions to protect animals, especially mammals such as cats, dogs, and humans. The antibodies may be used to passively immunize an animal, or as reagents in assay to detect infection of
                                                                                                                                                                                                                                                                                                                            Example 1; Column 49-50;
                                                                                                                                                                                                                                                                                                                                                                                                 Novel nucleic acid molecule encoding a Dirofilaria immitis cuticlin protein is useful as a vaccine to prevent parasitic helminth infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents the complete 1.66-megabase pair genome sequence of the Methanococcus jannaschii circular chromosome. The present invention describes M. jannaschii open reading frames from the genome sequence. The invention also describes a computer based system for identifying fragments of the M. jannaschii genome that are chomologous to target nucleotide sequences, comprising: (a) data storage means comprising the nucleotide sequence of the 164976, 58407 or 16550 bp sequence (see AAV21209, AAV21210 and AAV21211), or a nucleotide sequence of the sequence of the sequence of the data storage means to carget sequence to the nucleotide sequence of the data storage means to identify a homologous sequence, and (c) retrieval means for obtaining the homologous sequence. The method, which is based on whole genome crandom sequencing of an autotrophic archaeon M. jannaschii, the genome composition of the 164976 bp sequence given in AAV21210), and a small circular extra-chromosomal element (the 16550 bp sequence given in AAV21211), can be used in the identification of M. jannaschii genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                          21-MAY-2002
                                                                       ABK39779;
                                                                                             ABK39779 standard; cDNA;
                                                                                                                                                                                                                                                                           forming target:probe complex is copmplementary to a region selected from one of the 181 nucleic acid sequences (AAX99501-681). U. urealyticum is an opportunistic pathogen of the human urogenital tract that is a significant cause of adverse pregnancy outcome, neonatal disease, and suppurative arthritis. As the infections are commonly asymptomatic, it is presence in a patient. Also, as the pathogen has no current antibiotic directed specifically against it, it would be advantageous to isolate and basis for diagnosis of U. urealyticum infection as well as to develop new and improved drug therapies. The present invention provides such novel polynucleotide sequences (AAX99501-681).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes an isolated polynucleotide and polypeptide useful for stimulating and/or expanding T cells specific for a tumour protein for determining the presence of a cancer in a patient. A composition containing the polynucleotide and/or polypeptide is useful for treating a lung cancer in a patient. The polypeptide is useful for removing tumour cells from a biological sample. The polynucleotide is also useful as probe or primer to detect the level of mRNA encoding a tumour protein. This sequence encodes a lung tumour associated protein or protein fragment, described in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from utton at the sequence and of the sequence of the printed specification, but was obtained in electronic format directly from utton at the sequence and the sequence of the printed specification, but was obtained in electronic format directly from utton at the sequence and the sequence of the seque

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (INSP )

                                                                                                                                                           Ş
                                                                                                                                                                                                                                                             CC comprising the sequences given in AAZI2532 to AAZI779. Also described is CC cancerous state of a mammalian cell, comprising the sequences given in AAZI2532 to AAZI7799. Also described is CC a method of detecting differentially expressed genes correlated with the CC cancerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell CC suspected of being cancerous, where the gene product is encoded by one CC plynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides CC can be used for raising antibodies for experimental, diagnostic and CC therapeutic purposes. The polynucleotides may also be used to construct CC arrays for diagnostics (which may be used to determine function of an CC encoded protein); and to detect differences in expression levels between CC identify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC diagnosis, prognosis and management of colorectal cancer, breast cancer, CC and lung cancer. The polynucleotides can also be used to screen for
                                                                                                                                                                                             Matches
                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             03-APR-1998;

CC proteins, 7 transmembrane receptors, ATPases associated with various C cellular activities (AAA), eukaryotic aspartyl proteases, GATA family of C transcription factors, G-protein alpha subunit, phorbolesters or CC diacylglycerol binding proteins, protein kinase, protein phosphatase 2C, CC protein tyrosine phosphatase, trypsin, wnt family of developmental CC signalling proteins and WW/rsp5/WWP domain containing proteins. The CC encoded polypeptides also have a functional domain selected from Ank CC repeat, basic region plus leucine zipper transcription factors, CC bromodomain, EF-hand, SH3 domain, WD domain/G-beta repeats, zinc finger (CCHC class), and zinc-binding metalloprotease (C domain. The polynucleotides encode polypeptides with similarity to known protein families and are predicted to have similar properties. The novel CC applications. In particular, the products for use as therapeutic agents and in forensics, genetic analysis, mapping and diagnostic can be used for treating e.g. cervical CC cancers, melanomas, colorectal adenocarcinomas, Wilm's tumour, sarcomas, celoretinoblastoma, myosarcomas, lung carcinomas, leukemias, such as Chronic myelogenous leukemia, promyelocytic leukemia, and drift can be used for treating e.g. cervical complications and lymphomas such as histiocytic lymphoma, anhydric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-DEC-1998;
